BASIC-ABSTRACT:

NOVELTY - A flat color CRT is provided to minimize changes of components including a deflection yoke, shadow mask and an electron gun by reducing length of skirt portion of panel.

DETAILED DESCRIPTION - A flat color CRT comprises a panel having a flat outer surface, an inner surface with a predetermined curvature and a skirt extended in a vertical direction from the inner and outer surfaces; a yoke portion for mounting a deflection yoke; and a funnel coupled with the skirt of the panel. When the effective area of picture has two lines crossing at right angles, and the two lines have lengths of M and N, satisfying the expression  $M(\text{plus})N/\text{square}(M^2(\text{plus})N^2)$  at least 1.38. The diagonal effective area of picture has a size larger than 50.8cm. When the shortest distance from the extended plane passing an end of the panel side of the yoke portion vertical to the tube axis to the extended plane passing the panel and funnel assembly vertical to the tube axis is LF-TOR, and the shortest distance from the center of outer surface of the panel to the extended plane passing the panel and funnel assembly vertical to the tube axis is LP-OAH, the expression 0.44 less than LP-OAH/LF-TOR at most 0.65 is satisfied.
